CS230 Final Project

Authors: Leah Ferguson and Ashley Thomas

<div align="center">Cows vs. Monsters</div>

Notes:

- Our program successfully runs and works as documented.
- We did not provide notes in each file about who wrote them, because we pair programmed writing each class (with the exception of Cow, which was written entirely by Ashley). Our classes are highly dependent upon one another, which is why we wrote most of the code together.
- We provide cursory local testing in each class, but did much more rigorous testing as we played the game over 100 times and looked for bugs.
- Each of our classes contains javadoc compliant comments.
- We have included all of our code and all of the files necessary for the program to run (such as a .tgf file of our game board and images) in a folder named cowsvsmonsters. Our user manual, technical report, and labor-division are, along with cowsvsmonsters, in a folder named phase3.
- To run the program, run GameGUI.java.
